Transforming light and space

CONSERVATORIES

Choosing the style of your CONSERVATORY is an important decision and one that you need to consider carefully...

Not only do you need to think about the style that will best complement your home, but also the style that will match your lifestyle and be suited to how you want to use your new space.

Conservatories now have a number of performance glass roof options to help keep your conservatory warm and comfortable all year round.

Style breakdown:

GEORGIAN

Sometimes also known as an Edwardian. A flat-fronted style that offers excellent use of floor space due to a square or rectangular internal shape.

GABLE

A high roof slope and the same floor space as a Georgian. The front panel of the roof remains upright rather than sloping back to the centre as on a Georgian.

VICTORIAN

Its distinguishing architectural feature, a bay front, with either an angled (3 bay) or slightly curved (5 bay) front, combined with a steeply pitched roof and ornate ridge.

LEAN-TO

Ideal for properties with limited space under the eaves or an awkward area in which to fit a conservatory. A lean-to offers a variable pitch to suit your home.

P or T SHAPE

The P & T shapes take their name from the plan view of each design. Ideal for larger conservatories, a P-shape can combine for example a lean-to and a Georgian. The styles are better suited to larger properties.

CONSERVATORIES

The Classic roof is so configurable that your preferred retailer will be able to create a design to suit your home, whatever the architectural challenge.

Recognised throughout the construction industry as a symbol of quality reassurance

The ability to open up entire elevations of a conservatory with bi-fold or sliding doors gives a whole new modern edge to the conservatory

Combine full height glazing and choose one of three flat Cornices for the ultimate contemporary look.

Why not embellish your conservatory from a choice of Cornices - for a smoother finish and to hide the standard gutters!

3 TIER FLAT - Suitable for larger builds with bi-folds... great with Loggia columns!

2 TIER FLAT - A contemporary look for most build sizes

1 TIER - Suitable for smaller builds

Depending on the architectural style and period of your home, there are many design options to help you create the perfect traditional conservatory.

Add style and shape with Loggia Columns and a curved Cornice to create an elegant traditional look. A curved Cornice provides the ideal finishing touch to the roofline that both hides gutters and creates a beautiful silhouette. Create a striking feature at the corners of your conservatory with Super insulated Loggia Columns for a more refined finish.

LOGGIA COLUMNS - Choose from a simple elegant cladding infill or select the fluted infill for additional embellishment and a more refined finish.

CURVED CORNICE - Perfect for a more traditional build

Live life in COLOUR

You are already on the way to making a life changing decision by choosing a conservatory and why not consider colour?

Do you stick to conventional colours/finishes or do you choose something different? Carefully chosen colours creates a space that works best for you and your home.

The foil laminated colours used on major items in the roof and on the PVC side frames, have a real woodgrain texture to add a further dose of character. The products can be coloured or woodgrain foiled to one side or both sides with the possibility to mix colours between the outside and the inside.

Please ask about our standard and bespoke colour options.

Grey
Paint matching:
RAL7016

Rosewood

Light Oak

Irish Oak

A coloured conservatory consists of foiled and painted parts along with base colour extrusions. Every effort is made to ensure gloss levels are within reasonable tolerance. RAL and BS colour references are made in good faith. The colours above are reproduced as accurately as printing will allow, if in doubt always request an actual physical sample/foil swatch. White gutter on white foiled roofs and black gutter is standard on all colour/finishes except Rosewood and Light Oak, where base extrusion colours are used.

Your standard conservatory can be given an 'orangery' feel with the LivinRoom pelmet internally.

The LivinRoom pelmet comes in depths from 300mm to 1200mm which insulates the perimeter of your ceiling whilst giving you an orangery look at a value price point.

Why not;

- Enjoy the light from a conservatory with the feel of an extension - providing greater overall value for money and the best of all worlds.
- Live more comfortably with improved thermal efficiency when compared to a standard conservatory (additional insulation can be added by your retailer for enhanced comfort to reduce heat loss).
- Experience a real room/living room with more styling and furnishing options, the perimeter ceiling pelmet is perfect for down lighters, spotlights or speakers.
- Use the LivinRoom pelmet and external brick columns to achieve an affordable authentic orangery look.

Varying depths available from 300mm to 1200mm.

LivinLight gives you the option to choose the style of light that can be fitted in your conservatory.

LivinLight adds an insulated electrical housing system to the centre ridge under-cladding of a glazed roof. This wider platform enables you to install a greater selection of lighting than most conservatories offer and gives a more 'roomlike' feel.

Using the LivinLight you can add statement lighting to your conservatory, whether it's a low pendant over the dining table or a chandelier focal point, LivinLight allows you to achieve this with ease. The ridge is insulated to keep you warm in the winter and can also be painted to match or co-ordinate with your decor, giving your conservatory that individual look.

THE IMPORTANCE OF SMALL DETAILS

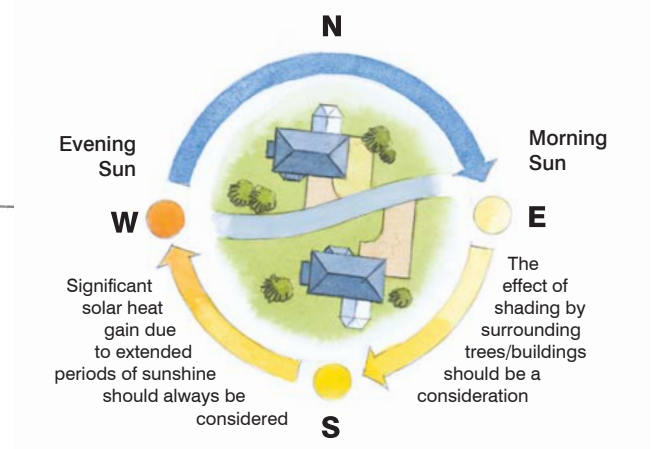

There are a variety of options to customise the exterior and interior of your new space. Here we explore just some of the ways you can add your own, unique finishing touches to the final design.

CLIMATE CONTROL

It's vital to the maintenance of a comfortable environment - ventilation is often overlooked by some manufacturers, but Ultraframe's roof systems take care of it.

The type of ventilation needed is specific to each conservatory, orangery or home extension, based on many considerations such as size, shape and most importantly, aspect in relation to the sun. South facing sites need to take into account the direct sunlight they receive in summer, whilst north-facing sites need to consider heating options for the colder months of the year. Other factors to consider include overshadowing of the conservatory from obstacles such as trees and buildings and the severity of wind and snow in your area.

If all this sounds complicated, let us help you select the best ventilation options for your build.

Ventilation is key within the structure of the roofs, so you can be assured that by choosing a home extension with an Ultraframe roof you're protecting your home extension from the elements and the potential for problems.

By specifying a home extension with an Ultraframe roof, you will be able to benefit from these ventilation features - see across right (minimisation of condensation, for example) and enjoy your home extension more of the year and it will have a long, trouble-free and low maintenance lifespan.

*Not all options are available with all systems/designs. Your Ultraframe retailer will advise accordingly.

VENTILATION

Trickle ventilation system in the ridge & lean to wall plate for Classic roof

As warm air rises, Ultraframe have developed a ventilation system to allow this air to escape via the roof, minimising the possibility for condensation to form.

Eavesflow (optional)

A trim that fits between the wall sideframe and roof, with built in ventilation and a slider on/off control button.

OPENING ROOF VENTS

Better than a window, a roof vent is a fast and effective way of allowing warm air to leave your conservatory. Ultraframe roof vents are supplied with either manual or electric openers. If you opt for electric openers then thermostats and rain sensors will allow for automatic opening and closing.

Rain sensor and thermostat.

Pole operated screw jack mechanism

CONSERVAGLASS:

When designing a conservatory, choosing the right specification of roof glass is crucial to your enjoyment and comfort. To enable a conservatory to be used all year round, a glazing material must be selected that deflects heat from the sun in the Summer and retains the warmth from heating appliances in the Winter. Also needed is a material that allows maximum light into your home.

KEEPS HEAT OUT IN SUMMER

TINTED

RETAINS WARMTH IN WINTER

TOUGHENED

REDUCES FABRIC FADING

TRUE SELF CLEANING

- Our sealed units offer a range of performance attributes - perfect for roofs
- All roof units are toughened safety glass: 4mm glass - 16 mm Argon filled cavity - 4 mm glass with black warm edge spacer as standard.
- All roof units are manufactured in specialist roof glass factories and are guaranteed for 10 years.
- All specifications are true 'self cleaning' and offer a range of solar control properties.

POLYCARBONATE

Polycarbonate roof glazing is a lower cost alternative to glass but still provides excellent thermal properties and aesthetics.

Polycarbonate is available in a range of colours, thicknesses and specifications:

- Clear • Bronze
- Opal • Bronze/opal
- Solar control
